IAR/IUR/IER/CUR/CER SERIES "10, 1RU" HYDRAULIC MAGNETIC CIRCUIT PROTECTORS

Introduction

The Airpax™ IAR/IUR/IER/CUR/CER series is a snap-acting hydraulic-magnetic circuit breaker / protector that combines power switching and accurate, reliable circuit protection in one aesthetically pleasing, "1U" or "1RU" sized package.

Designed for rack mount applications, the IAR/IUR/IER/CUR/CER series allows efficient use of rack space without sacrificing performance via proven hydraulic-magnetic technology that provides consistent operation from -40°C to 85°C, with a circuit interrupt capacity up to 5,000 AIC at 80VDC and 2,000 AIC at 250VAC. Available in series trip and mid-trip configurations, with auxiliary alarm switch options to provide monitoring of critical circuits. The CER series circuit breaker provides the necessary ratings for wireless and wired applications while meeting UL489A and TÜV requirements for approval.

Features

- UL1077, TÜV, UL489A approved
- Designed to fit in a "1RU" application
- 5000 AIC (80VDC), 2000 AIC (250VAC) interrupt capacity

Sensata

Technologies

- Series or mid-trip with auxiliary switch alarm options
- Various delays including motor start
- 1 to 2 poles, multiple termination options

POLES & TERMINALS

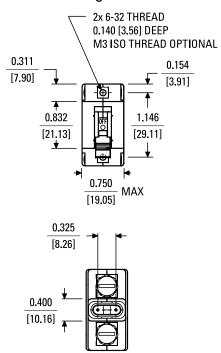

The Airpax[™] IAR/IUR/IER/CUR/CER series is available with one or two poles with various bullet, stud and screw terminals. Engineered for safe, sure operation, the toggle handles may be specified in blue, white, red, orange, green, yellow or black.

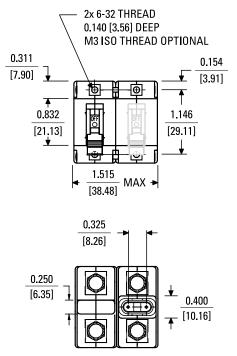

Single Pole

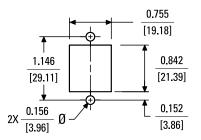

Two Pole (with or without two handles)

5/16" Bullet Terminals

Series Trip

The most popular configuration for magnetic protectors is the series trip where the sensing coil and the contacts are in series with the load being protected. In addition to providing conventional overcurrent protection, it is simultaneously used as an on-off switch.

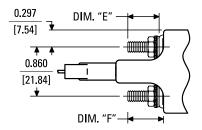

10-32 or M5 Screw Terminals

0.205

0.275

[6.98]

Two Pole, Series Trip

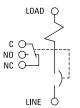

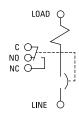

Mid-Trip

This is furnished as an integral part of a series pole in single or, multi-pole assemblies. Isolated electrically from the protectors circuit, the switch works in unison with the power contacts and provides indication at a remote location of the protector's ON-OFF status.

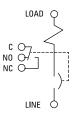

Breaker shown in ON position or manually turned OFF position

Breaker shown in mid-trip position (electrically tripped)

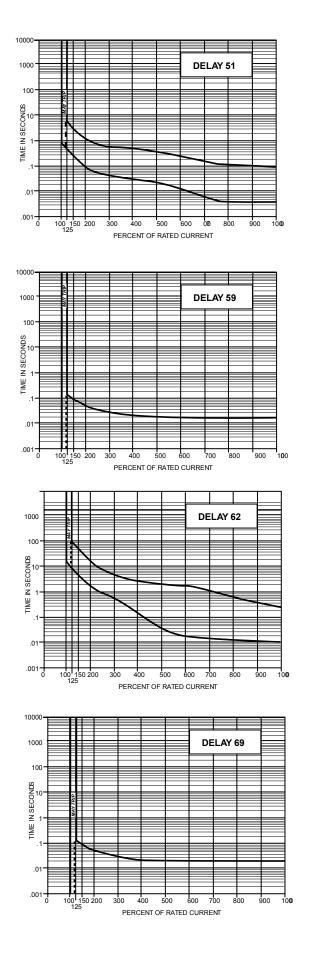

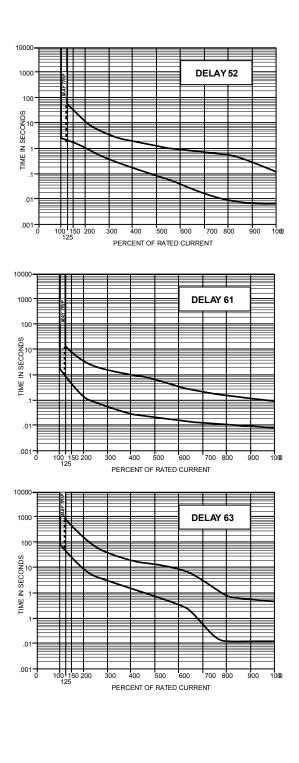

Breaker shown in OFF position

Auxiliary Switch

This is furnished as an integral part of a series pole in single or, multi-pole assemblies. Isolated electrically from the protectors circuit, the switch works in unison with the power contacts and provides indication at a remote location of the protector's ON-OFF status.

DC, 50/60Hz Delay Curves (typ)

A choice of delays is offered for DC and 50/60Hz applications. Delays 59 and 69 provide fast-acting, instantaneous trip and are often used to protect sensitive electronic equipment (not recommended where known inrush exists). Delays 51 and 61 have a short delay for general purpose applications. Delays 52 and 62 are long enough to start certain types of motors and most transformer and capacitor loads.

Trip Free

Will trip open on overload, even when forcibly held on. This prevents operator from damaging the circuit by holding handle in the ON position.

Trip Indication

The operating handle moves forcibly and positively to the OFF position on overload.

Ambient Operation

Operates normally in temperatures between -40° C and +85°C.

Insulation Resistance

Not less than 100 megaohms at 500Vdc.

Dielectric Strength

Shall withstand AC voltage 60 Hz, for 60 seconds between all electrically isolated terminals as described below Series, switch only: 3,750 VAC Auxiliary switches: 600 VAC Series w/ auxiliary switch: 3,750 between main circuit breaker terminal and auxiliary switch terminal.

Shock

Shall not trip when tested per MIL-STD-202, method 213, test condition 1 with 100% rated current applied to delayed units, except 90% current in plane 4, (i.e. handle down). Instantaneous units shall have 80% rated current applied in all planes.

Vibration

Shall not trip when vibrated per MIL-STD-202, method 204, test condition A with 100% rated current applied to delayed units and 80% rated current to instantaneous units.

Endurance

In many applications contact wear due to the electrical load determines unit life. At maximum electrical ratings, the IAR/UR/IER/CUR/CER can perform 10,000 operations at rated current and voltage at a maximum rate of 6 operations per minute.

OPERATING CHARACTERISTICS

Inrush Pulse Tolerance

Many circuit protector applications involve a transformer turn-on, an incandescent lamp load, or a capacitor charge from a DC source. Each of these applications has one common factor: a steep transient of very high current amplitude and short duration. This takes the form of a spike or a single pulse and is the cause of most nuisance tripping associated with magnetic circuit breakers.

The IAR/IUR/IER/CUR/CER series will withstand, without tripping, a single pulse of 8 milliseconds duration half sine wave configuration) and peak amplitude of 10 times its rating.

HARDWARE

Handle Lock

A handle lock option is available to prevent accidental actuation of the handle. The handle lock may be used in the ON or OFF position. Use of the handle lock on breakers with alarm style auxiliary switches may defeat he alarm feature on electrical trip. This option is available separately or preassembled (on single pole constructions only).

www.sensata.com

Mid-Trip

The handle position indicates the status of the circuit breaker. In addition to full ON and full OFF positions, there is a middle "MID-TRIP" position indicating that the breaker has electrically tripped from an overload. It is available in single pole and multi-pole (handle per pole only) series constructions. Switch only configuration is not available in mid-trip build. An auxiliary switch can be furnished as an integral part of the mid-trip breaker. The switch provides an indication at a remote location when the circuit breaker has electrically tripped and handle is in the mid-trip position.

ORDERING OPTIONS

Example : IER1-1REC4C-52-20.0-AD-01-T

The ordering code for these circuit breakers / protectors may be determined by following the steps in the decision tables shown here. The example shown is the code for a UL1077 & TÜV approved circuit protector with series trip, one handle per unit, single pole circuit protector with 10-32 terminal screws standard and a mechanical auxiliary switch. This unit is designed with a slow DC time delay and a rating of 20 amperes with optional metric threads and optional 80VDC capability. Handle color is black with white markings, and is has been met all the selection criteria to obtain the TÜV approval.

To determine the ordering code for your particular unit, simply follow the steps shown, then fill in the letters and/or numbers in the boxes. Space is available on the circuit breaker label for your part number (up to 12 digits). You may then use your own part number to place an order or as a reference for further questions you may have. This option does require a factory assigned part number for traceability to your drawing or internal part number.

RISK OF MATERIAL DAMAGE AND HOT ENCLOSURE

- . The product's side panels may be hot, allow the product to cool before touching
- · Follow proper mounting instructions including torque values
- · Do not allow liquids or foreign objects to enter this product

Failure to follow these instructions can result in serious injury, or equipment damage.

HAZARD OF ELECTRIC SHOCK, EXPLOSION OR ARC FLASH

- Disconnect all power before installing or working with this equipment
- Verify all connections and replace all covers before turning on power
- Failure to follow these instructions can result in death or serious injury
